### Inform Consent and Patient Information

Preparation and Scan: No need to take mold, no gagging/vomiting.

Design & Milling: Single composite/polymer crown can be fabricated in 10 minutes.

Wide ranges of colour to choose from, at the chairside. Shade can be selected, tested and confirmed by patient before milling. What you see is what you get.

Upon request, individual preference and characterization eg. slight modification in colour/spots can be done at chair side.

Cementation-leave with beautiful smile in the same day

Various options: crown, bridge, Veneer, Laminate(No trimming), inlay, onlay, partial crown

Design with 40 times magnification, better margin, fitting and better contact with adjacent teeth and opposing teeth.

Advantages:

Same day finish, save time, travel and money.

No temporary crowns/inserts, no loose temporary crown. More effective and more comfortable.

There is no loose/temporary repair between the follow-up visits.

High quality prosthesis fit and minimal adjustment

More pleasant: No temporary crowns, no loose parts. More effective and more comfortable.

There is no loose/temporary repair between the follow-up visits.

High quality prosthesis fit and minimal adjustment

More comfortable because no impression material, faster model taking.

Reduce the chance of repeated models and reduce the number of visits

Computer scanning reduces overall chair-side time, giving patients a more comfortable experience and higher satisfaction.

Digital bite: No messy material to hold the upper and lower teeth together, thus more accurate and less adjustment needed when fitting the restoration on the tooth.

Cost:

Cost is depend on the time used, materials, size and unit of restorations:

Polymer/Composite Crown/Veneer/Bridge: RM850-950

(3 unit crowns joined together counted as 3 units Crown)

Full Ceramic Crown RM1800-1950 (45 minutes surface smoothinging in oven needed)

Zirconia (Normally for back teeth) : RM2500-2800 (8 hours heating in oven to harden is needed)

Wide range of materials:

Composite/Polymer (Not Porcelain), Porcelain, Zirconia (Vita, Ivoclar, Dentsply Sirona, Coltene, Shofu, Merz & GC)

Disadvantages and limitations:

i)Not suitable for bridges more than 2 teeth lost.

ii)Not suitable if the margin of the crown is too deep under the gum

iii)Zirconia might take 8 hours to heat inside the furnace-same day crown will only be possible with precise time planning.
