Patient Information: Help You To Make Informed Decision

In- Office Whitening by COLD LIGHT Whitening Machine

The teeth whitening accelerator machine that using a strong blue LED light with a specifically wavelength (between 420 – 490 nm), translucent mixture of teeth whitener that made with special technology is activated.

The rapid creation of redox produces mass of oxygen, oxygen ion permeates through the dentinal tubules to oxidize and decompose the tooth stains (color molecule) on both the tooth surface as well as deep inside the dentine to achieve the whitening effect; average improved 3-5 VITA level

By using this advanced teeth whitening technology, with lower temperature, it avoids stimulation of nerve and so reduce the sensitivity during and after the treatment; it won't hurt soft tissue as well.

Besides, at ONLY one dental visit, you can see the amazing whitening results which last up to 2 years! Therefore, it is recognized as the most effective and safest dental whitening technique.

- 30 minutes treatment
